Physical Activity Readiness Questionnaire

(PAR-Q)

Name:	Date	9:

A Questionnaire for People Aged 15 to 69

Regular physical activity is fun and healthy, and more people are starting to become more active every day. Being more active is very safe for most people. However, some people should check with their doctor before they start becoming much more physically active.

If you are planning to become much more physically active than you are now, start by answering the seven questions in the box below. If you are between the ages of 15 and 69, the PAR-Q will tell you if you should check with your doctor before you start. If you are over 69 years of age and you are not used to being very active, check with your doctor.

Common sense is your best guide when you answer these questions. Please read the questions carefully and answer each one honestly: check YES or NO.

ES	NO			
		 Has your doctor ever said that you have a heart condition activity recommended by a doctor? 	n and that you should only do physical	
		2. Do you feel pain in your chest when you do physical acti	vity?	
		3. In the past month, have you had chest pain when you w	ere not doing physical activity?	
		4. Do you lose your balance because of dizziness, or do you	balance because of dizziness, or do you ever lose consciousness?	
		5. Do you have a bone or joint problem (for example, back, by a change in your physical activity?	oone or joint problem (for example, back, knee or hip) that could be made worse your physical activity?	
		6. Is your doctor currently prescribing drugs (for example, w heart condition?	vater pills) for your blood pressure or	
		7. Do you know of any other reason why you should not do	physical activity?
